

ScriptPro®

Eyecon® and ScriptPro Interface with Eyecon

ScriptPro and Eyecon® (by GSE) have teamed up to integrate SP Central Workflow, SP Central Pharmacy Management, and ScriptPro Robotic Systems with the Eyecon tabletop tablet/capsule counting device. The Eyecon uses a Visual Counting System™ to count filled prescriptions, verify prescription double counts, and facilitate physical inventory counts (including verifying robot cell quantities). ScriptPro's Interface with Eyecon integrates the counting accuracy of the Eyecon with the efficient workflow inherent in SP Central.

Simply scan the ScriptPro label barcode on the Eyecon to initiate the count—all information required to complete a manual count was sent to the device when the ScriptPro label was generated.

Eyecon product details:

- Counts poured pills in 200ms and updates the count on-screen five times per second.
- Recognizes broken tablets and foreign matter on the tray and will alert users to the problem.
- Easy to clean, with no hidden compartments, and comes with separate trays for counting sulfa and penicillin drugs to prevent cross-contamination.

Now you can rely on Eyecon and ScriptPro's Eyecon Interface to support accurate manual fills, double counts, and physical inventory counts, allowing your staff to focus on other important tasks such as customer service and quality assurance.

Eyecon

The Eyecon uses a Visual Counting System™ to count filled prescriptions, verify prescription double counts, and facilitate physical inventory counts

Specifications*

Weight: 18 lbs (8.2 kg)

Electrical Input: 100-240 VAC, 47-60 Hz

Computer/Software: Peripheral on ScriptPro-installed network server; Eyecon Model 9400.

Display: 6.5" Color LCD flat panel touchscreen

Temperature: 50°F to 90°F (10°C to 32°C)

Barcode Scanner: Class 1 Laser, Symbologies: UPC/EAN, Code 39, I 2 of 5

Implementation Options: ScriptPro offers the following implementation options.**

Serial Device: Eyecon connects directly to ScriptPro equipment as a Serial Device

Communication: Serial USB

Number of Eyecon connections supported:

1 Eyecon connection included; each additional Eyecon connection requires purchase of a ScriptPro Serial Interface Controller

No Connection: Eyecon is not connected to ScriptPro. ScriptPro will add the product barcode to the prescription label to facilitate prescription counts; customer should contact ScriptPro Customer Service to implement this functionality (no cost).

Minimum ScriptPro System Requirements:

XP+/.NET 4, 07.18+, 10.15+, 12.18+

Platforms Supported:

Standalone Robotics

SP Central Workflow System

SP Central Pharmacy Management System
