

SP 200—your best insurance in uncertain times

Robotic arm counts and fills without cross-contamination.

The SP 200 controls dispensing costs.

“Our costs associated with prescription dispensing kept increasing and our volume was rising. Hiring another person seemed to be our next step, but that would mean paying additional wages, benefits, etc.

“I decided that getting automation would be a step toward controlling our dispensing costs. I wanted to take advantage of the tax benefits of buying automation, too. Tax savings really make an impact. I think more pharmacies would get automation if they understood the tax benefits.

“We had another robotic dispensing system in another store but we wanted a system that had more reliable customer service. We have never heard anything but good things about ScriptPro and its customer service, so we invested in the SP 200.

“Now that we have ScriptPro, we’ve found features within the system that help us run our business. The reports are valuable. Each week we review the top moving drugs in the robot. We swap out slow moving drugs for faster moving drugs and

maximize the utilization of our automation. The cell design is so simple that changing the drugs is very easy.

“The customer service at ScriptPro is outstanding. You can call 24/7 and talk directly to a person who can help you.

The entire process was so easy

since ScriptPro’s people perform the installation—not a third party company.

“By having a ScriptPro robot, I haven’t needed to hire more people, even with our volume increasing.”

Jose Campon, Owner

JAC Pharmacy

Customer Since 2011

Pharmacy Type: Independent

Prescription Volume: 200 - 300 per day

System: SP 200 CCC

Location: Jackson Heights, NY

ScriptPro®
