

St. Jesus Pharmacy eliminates doubts about errors

Robotic arm counts and fills without cross-contamination.

Thousands of pharmacies rely on the SP 200 Robotic Prescription Dispensing System to improve patient safety.

“When our prescription volume reached 400 prescriptions per day it became very difficult to monitor all of them. Always in the back of my mind was the question, ‘Am I making mistakes?’

“I heard other pharmacists talking about automation as the way to gain confidence about dispensing accuracy.

“First, I considered the cassettes, but I was unimpressed with the technology. I wanted technology with a more complete process. I didn’t believe that installing cassettes would really reduce the chance for errors. And I didn’t want to have to worry about cell

calibration problems I’d heard about. With the SP 200, the cells are calibrated on-site very easily.

“I made a worthwhile investment with ScriptPro—it was a very good decision. I highly recommend to other pharmacists to get ScriptPro’s robot and SP Central Workflow System. I only wish I had gotten the system five years earlier.

“The technology makes this job a whole lot easier for the pharmacist. I can sleep at night because I feel more confidence in our dispensing process.

The tracking capabilities of SP Central make it very difficult to make an error.”
