ScriptPro Awarded Contract to Provide FDA Drug Database

MISSION, KS—ScriptPro USA Inc. has been awarded a contract by U.S. Food and Drug Administration (FDA) to provide a searchable drug database for FDA internal use. The database, which is based on the drug information resource provided by ScriptPro to support its pharmacy automation systems, will include all prescription and over-the-counter drug products available for human use in the United States. ScriptPro develops and maintains the largest and most complete electronic image database of drug and over-the-counter products applicable to the United States, Canada and other international markets.

The database will include the following advanced features:

- High-quality drug and drug package images for on-screen product verification.
- All versions of each drug (NDC) released in the market, including images, markings and other descriptive elements distinguishing the NDC versions.
- Auxiliary warning labels applicable to the products.
- Drug-specific alerts including FDA Black Box Warning labels.

ScriptPro's industry data resources team works closely with pharmaceutical and OTC manufacturers to incorporate new products and changes into the database. ScriptPro will monitor FDA's internal records and provide information to keep FDA data current.

ABOUT SCRIPTPRO: ScriptPro develops, provides and supports state-of-the-art, robotics-based management and workflow systems for pharmacies. ScriptPro is dedicated to helping pharmacies lower operating costs, reduce dispensing errors and maximize customer satisfaction. ScriptPro technology helps pharmacies operate efficiently and profitably so they can deliver the maximum contribution to the healthcare system. ScriptPro, with headquarters in Mission, Kansas, provides automation to thousands of pharmacies worldwide.
