

# ScriptPro Product Information Exchange

ScriptPro develops, provides, and supports state-of-the-art, robotics-based management and workflow systems for pharmacies. Founded in 1994, we started with the SP 200, the first robotic prescription dispensing system for community pharmacies. Over the years we've developed additional systems that automate 100% of the dispensing process.

Since our first installation in 1997, we have provided thousands of pharmacies in North America and around the world with powerful tools to improve safety, efficiency, and patient care in pharmacies.

With patient safety as our top priority, our proprietary drug database of over 70,000 product images and 76,000 drug product records is a key factor in maintaining that safety and control.

**ScriptPro's Drug Database. Surpassing all Others.**

## About the ScriptPro Drug Database

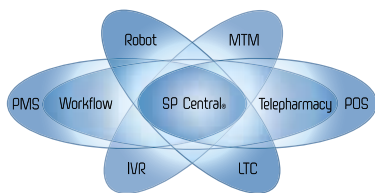

The information in our drug database is used by the pharmacy staff during the prescription verification and dispensing process. ScriptPro's Industry Data Resources group continually adds and modifies data and images for a complete and accurate representation of each distributor's product portfolio. Our customers automatically receive drug and image updates to their system servers on a frequent basis.

## About the Product Information Exchange

To ensure your product information is current in ScriptPro's drug database, we invite you to participate with us in our Product Information Exchange.

- ✓ We ask that ScriptPro be added to your change notification procedures so that we receive product additions, changes, or discontinuations.
- ✓ We ask that you send product samples and/or images to ScriptPro as they come onto the market.

Note: ScriptPro is registered with the Kansas Board of Pharmacy and the DEA as a research and development facility and can accept product samples for the purpose of photographing.

ScriptPro® Perfect Integration.

ScriptPro's drug database supports over 70,000 product images, which are professionally edited and presented in a standard format.

ScriptPro's drug database supports all the information pharmacies need to ensure dispensing accuracy, including a comprehensive product description.

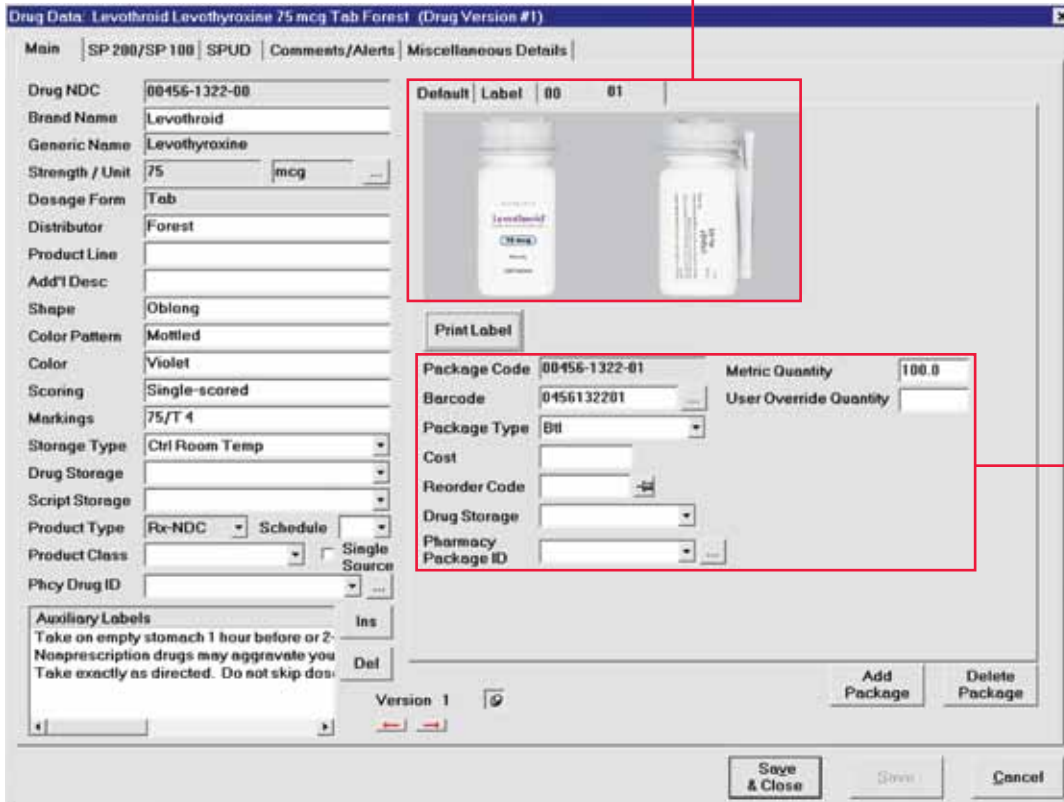

The screenshot shows a software window titled 'Drug Data: Levvothroid Levothyroxine 75 mcg Tab Forest (Drug Version #1)'. The window has several tabs: 'Main', 'SP 200/SP 100', 'SPUD', 'Comments/Alerts', and 'Miscellaneous Details'. The 'Main' tab is active, displaying a form with the following fields:

Drug NDC	00456-1322-00
Brand Name	Levvothroid
Generic Name	Levothyroxine
Strength / Unit	75 mcg
Dosage Form	Tab
Distributor	Forest
Product Line	
Add'l Desc	
Shape	Oblong
Color Pattern	Mottled
Color	Violet
Scoring	Single-scored
Markings	75/T 4
Storage Type	Ctrl Room Temp
Drug Storage	
Script Storage	
Product Type	Rx-NDC Schedule
Product Class	Single Source
Phcy Drug ID	

Below the main form is an 'Auxiliary Labels' section with the text: 'Take on empty stomach 1 hour before or 2 Nonprescription drugs may aggravate you Take exactly as directed. Do not skip dos'. To the right of the form is a large image area showing two oblong, violet tablets. One tablet is marked '75' and the other is marked 'T 4'. A red box highlights the image area. At the bottom of the window are buttons for 'Save & Close', 'Save', and 'Cancel'. The text 'Version 1' is also visible.

ScriptPro provides recommendations for auxiliary warnings for each medication. These warnings can be modified by the pharmacists at their discretion.

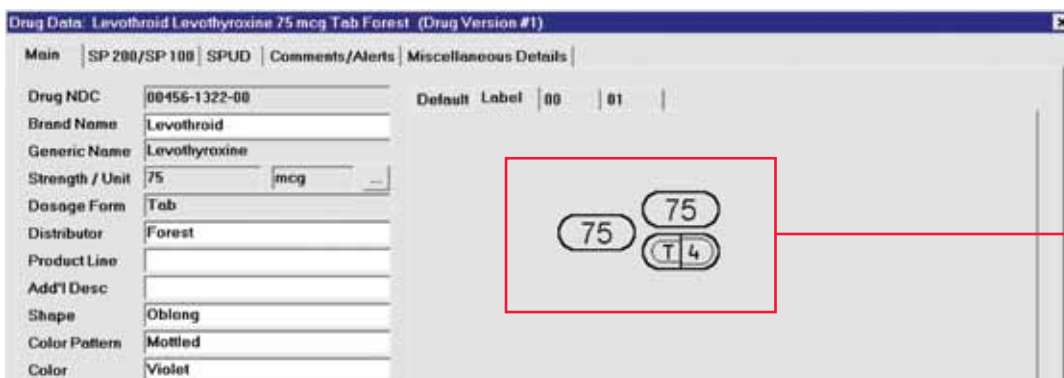

ScriptPro's drug database supports package images to provide a visual verification for manually filled products.

ScriptPro systems are barcode driven. Our drug database supports each package's unique barcode, ensuring the correct product is dispensed.

“Having an electronic database of pharmaceutical information and pictures is vital during the verification process at the pharmacy. ScriptPro does an exceptional job of keeping current product information in its database for the thousands of pharmacies using ScriptPro automation to dispense and verify prescriptions.”

—Amanda Rebnicky, Manager, Operations, Heritage Pharmaceuticals

ScriptPro's drug database supports line drawings of the dosage form that print on the prescription label along with the shape, color, and markings of the medication.

# Multiple Version Support

When product appearance changes, ScriptPro's drug database provides the same high quality data for all versions currently in distribution.

Accurate descriptive data is available for a drug with multiple versions.
