

SP Datapoint

SP Datapoint is a compact, interactive countertop unit for entering, filling, verifying, dispensing, and tracking prescriptions. It integrates an adjustable height touchscreen monitor, barcode scanner, and an optional SP Printer labeling device to provide workflow control and dispensing accuracy.

SP Datapoint interfaces with ScriptPro's SP Central Pharmacy Management System to process prescriptions from point of entry to point of sale. It displays on-screen prescription status lists, automates the collation of patient prescriptions, and provides paperless prescription tracking and batching for each patient.
