5828 Reeds Road • Mission, KS 66202 • 800.606.7628 • www.scriptpro.com

Welcome to ScriptPro Telepharmacy! At ScriptPro, we have designed the safest, most advanced telepharmacy system in the world so your pharmacy can provide advanced patient care anytime, anywhere, and still maintain control over the entire prescription dispensing process!

ScriptPro Telepharmacy adds real-time video/audio/desktop connection and electronic prescription inspection images to ScriptPro's state-of-the-art SP Central® Workflow System, which includes script scanning and electronic signature capture.

ScriptPro Telepharmacy is easy to use. Here's how the system operates to connect pharmacy locations:

Filling Prescriptions (Remote Pharmacy)

- Scan the product barcode or robot-filled vials on the SP Station®.
- Scan the prescription hardcopy into the Script Scanner (if applicable).
- Take an Inspection Image of the pills or the unlabeled unit-of-use item and the prescription label.
- Place an Inspection Call to the support pharmacy for prescription verification.

Verifying Prescriptions (Support Pharmacy)

- Pharmacist answers the Inspection Call.
- Staff at remote pharmacy scans the barcode on the prescription label, allowing both sites to see the prescription information and images on-screen.
- Pharmacist verifies the prescription, and then batches it to the designated storage location, such as Will Call.
- Pharmacist hangs up call.

Counseling and Dispensing (Remote Pharmacy)

- Technician or nurse scans the batch barcode on the SP Checkpoint™ to dispense.
- Patient requests counseling on the Electronic Signature device, then signs.
- System prompts the staff to place a Counseling Call to the support pharmacist.
- Pharmacist counsels patient and dispensing is complete.

Prescription Verification— What do you see on-screen?

To verify each remote prescription, ScriptPro Telepharmacy puts everything you need at your fingertips. Placing an Inspection Call from one pharmacy to another creates a remote-control connection between the two computer screens, allowing each site to view the prescription information. A live audio/video connection also runs during the Inspection Call so staff at both sites can communicate with each other.

Here's what you see:

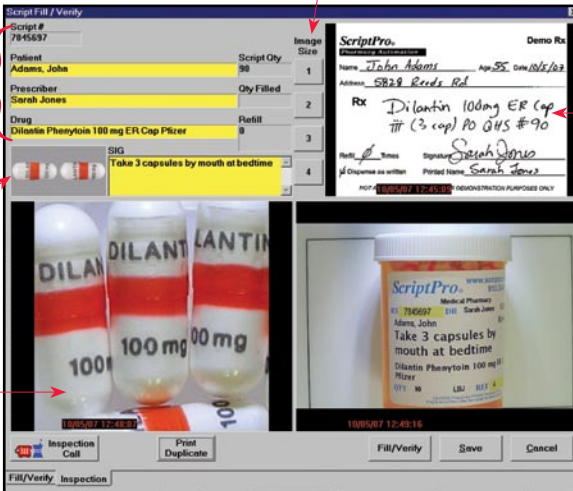

Rx information captured from pharmacy management system

ScriptPro Database Image

Inspection Images (taken at remote pharmacy)

Buttons used to take Inspection Images

Prescription hardcopy (scanned at remote pharmacy)

Script Verify Dialog (viewed concurrently by both sites)

In-Session Dialog

Audio and video connection between remote staff and support pharmacist
