

Notice Board

SP Central's Notice Board offers quick patient notification when prescriptions are ready for pickup. The final step of the prescription filling process triggers the Notice Board to display the patient's name, or partial name, depending on the pharmacy's choice. Display information is configurable to meet pharmacy preference and HIPAA requirements. The display also supports pharmacy messages, such as holiday store hours and promotions.

Patients know immediately when their prescription is ready. Wait time is reduced and questions to the staff about prescription status are minimized. Everyone benefits from the quiet, efficient information exchange.

Configurable to show full or protected patient name (as shown), or other identifying information such as date of birth or ticket number for sites utilizing ScriptPro's Pharmacy Services Portal.
