

“The Future of Pharmacy is ScriptPro Automation”

Robotic arm counts and fills without cross-contamination.

Thousands of pharmacies rely on the SP 200 Robotic Prescription Dispensing System to improve patient safety.

According to Steve and Mindi, the store was chaotic before ScriptPro automation. All prescriptions were counted by hand using a tray—several hundred per day. The effort to avoid a mistake in those conditions is a tremendous burden, they said.

Automation is the Future

Steve said he looked at automation because, “I decided if I wanted to stay competitive, stay current, and get my pharmacy moving where I wanted to be in the future, automation is where I needed to go. Now, I can’t imagine working without it.”

Mindi said, “The ScriptPro system makes me more comfortable with the prescriptions we’re sending out the door. For example, the workflow shows us exactly where the prescriptions are at all times.

Signature sign-out verifies what was picked up and the date. Before, we couldn’t prove whether people received their complete order, and now we can. SP Central Workflow ensures that an order is complete—the person is highlighted on the screen and every drug for that person is listed.”

“The system does exactly what ScriptPro advertises,” said Steve. “I can’t believe we ever ran a pharmacy without it. It has saved us

frustration, headaches, chaos, and stress. It helps on my taxes, too, because I take the depreciation.”

“I truly believe that the future of pharmacy is going toward automation and to be a modern store, automation is the way to go. And ScriptPro is the best automation program out there.”

Medicap Pharmacy
Customer Since 2006
Pharmacy Type: Independent
Prescription Volume: 600 per day
System: SP200 and SP Central Workflow
Location: Harrisburg, IL
