

# Perfect Integration brings cost savings, convenience to employee pharmacy

ScriptPro® Perfect Integration.

“Perfect Integration”—all the technology you need to run your pharmacy.

SP Central Workflow coordinates the entire pharmacy dispensing process.

Southeastern Regional Medical Center operates a pharmacy for employees of the Medical Center. According to Annette Bullard, PharmD., Assistant Director of Pharmacy, offering the benefit is a great convenience for the employees and provides a cost savings to the hospital, which is self-insured.

“When deciding to automate the pharmacy, the ScriptPro workflow and management systems were attractive because they are a turnkey, one vendor solution,” Annette says.

Pharmacy Manager Jeff Edge explains the benefits of working with ScriptPro’s Perfect Integration system: “The automated tracking, batching, and record-keeping make our process so organized.

“The automated batching is valuable in several ways. It keeps all prescriptions for one patient together at all times. If one prescription is scanned for a patient, all the prescriptions for that patient drop into a queue on the screen so that at point of sale, the technician knows to get all prescriptions for that patient.

“We also can have batching for designated groups, such as hospice. ScriptPro batches them and the electronic

record can be placed in a marked location. Additionally, each prescription can be flagged for a location, such as refrigerator or reconstitution. Then, at the point of sale, the batch label is scanned and we know where to find each prescription.

“Another feature that helps us provide better patient care is the ability to insert comments throughout the process. For example, we can add a note to ‘Remind Mrs. Smith to pick up the OTC when she gets her prescription.’ You can also select where you want the comment to pop up in the process—data entry, fill, verify, or dispense.

“The Perpetual Inventory feature has really simplified our inventory process. Our inventory is much more accurate because the ScriptPro system orders new stock automatically. It tells our

wholesaler, through the electronic data interchange, what medications we need and the quantity. We can click on a button to see what we are ordering at any given time. Then the inventory is sent to us, and after a visual check to verify everything we ordered, we just click a button on the screen to automatically update our inventory count.”
