

Because our customers are #1

We have automated our prescription dispensing process with the ScriptPro SP 200® Robotic Prescription Dispensing System.

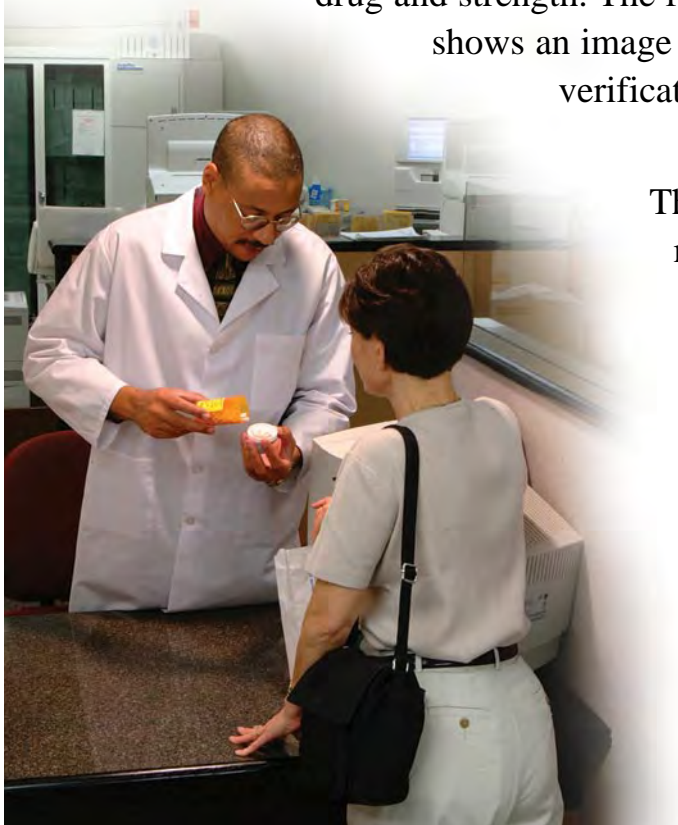

SP 200

When we receive your prescription, the robot will automatically choose a vial, take it to the correct drug cell, and fill it. The robot then labels the filled vial and sends it down a conveyor to our pharmacist for final inspection and capping.

SP 200
Robotic Arm

The system has barcode scanning steps along the way to ensure that we always dispense the proper drug and strength. The final check screen shows an image of the drug for visual verification by our pharmacy staff.

This state-of-the-art technology will allow us more time to talk with you, our valued customer, about the medications you are taking. We will be able to fill your prescriptions quickly with our new SP 200 working in the background. As healthcare professionals, we want to meet your needs and give you the highest level of personalized service.
