

# Investment in SP 100 good for 10 years or more

Robotic arm counts and fills without cross-contamination.

SP 100 Robotic Prescription Dispensing System relieves stress on staff.

“We looked for an automated dispensing system that would help achieve these goals: optimize the pharmacists’ time to help patients, relieve stress on staff, and lower the patient wait times.

“We chose ScriptPro’s SP 100 over another robot because ScriptPro offers simplicity. The ease of filling the cells in a ScriptPro robot is important in order for us to maximize utilization of the robot.

“We prefer that the filled vials be uncapped for verification. That way we only apply the cap once and can use the cap that our customer prefers. Senior citizens use a snap cap, which isn’t the style supported by the other robots. Also, I verify by looking inside the vial and if it is already capped, I would need to remove each cap for verification.

“Something very important to note is the exceptional customer support from ScriptPro. From Sales to Service, it is outstanding.

“The cost for ScriptPro over five years is the same as for a technician. We expect our system to last up to 10 years or more, making it a very worthwhile investment.”

*Jamil Rawji, R.Ph., Owner*

## **Ponoka Professional Pharmacy**

*Customer Since 2011*

**Pharmacy Type:** Independent

**Prescription Volume:** 300 per day

**Location:** Ponoka, Alberta, Canada

**System:** SP 100

“I work with the ScriptPro SP 100 every day and one of the best features is the ease of calibrating and loading the cells. The other system we investigated took a lot longer to calibrate; we couldn’t see how we would save much time with that system. The SP 100 fit perfectly in our pharmacy. And, we have the option to get an SP 200 without buying a whole new robot.”

*Dwayne Waknuk, R.Ph.*
