

# Value of robot increases with time at Seeber's

Robotic arm counts and fills without cross-contamination.

Thousands of pharmacies rely on the SP 200 Robotic Prescription Dispensing System to improve patient safety.

John Skovmand decided to automate the prescription filling process at Seeber's United Drug when the pharmacy's prescription volume hit 225 per day.

"I amortized the cost of the robot over five years, including benefits, and determined the cost would be the same for buying the robot as for hiring a technician. That was seven years ago. **It was worthwhile seven years ago and even more so today.** And now that the machine is paid for, the cost is much less per hour than a technician's salary.

## Seeber's United Drug *Customer Since 2001*

**Pharmacy Type:** Independent  
**Prescription Volume:** 275 per day  
**Location:** Santa Paula, CA

"ScriptPro came highly recommended. As a Board Member for United Drug, I heard a lot about the company and about its customer service.

Everything I heard about ScriptPro turned out to be true. The robot doesn't call in sick, but it does have a doctor who comes right away when we call—and makes house calls!

"Our prescription volume has grown from 225 to 275 per day, but I haven't needed to hire additional staff. The robot paid for itself and has kept my employment costs stable."

*John Skovmand, R.Ph., Owner*
